**1. Read the following passage and answer the questions:**

Organic farming was being practiced in India years ago till the British ruled it. In traditional India agriculture was practiced using organic techniques where the fertilizers, pesticides were obtained from plants and animal products. Organic farming was the backbone of the Indian economy. Ploughing was done by bullocks and cowdung was being used as manure.

During the 1950s and 1960s, the ever increasing population of India and several natural calamities led to severe food crisis. As a result, the government was forced to import food grains from foreign countries, to increase food security the government had to increase food production. Several additional hectares of land was brought under cultivation.

Hybrid seeds were introduced. Natural and organic fertilizers were replaced by chemical fertilizers and locally made pesticides were replaced by chemical pesticides. As time went by, extensive dependence on chemical farming has led to a loss of land fertility. Requiring the farmers to use stronger and costlier pesticides. Due to increase cost of farming farmers are falling into the trap of money lenders who are exploiting them to know and forcing many to commit suicide.

a. Where were the fertilizers pesticides obtained from in traditional India?

---

---

b. What has increased the cost of farming?

---

---

c. Why do farmers commit suicide? Choose the correct option:
